Care of your Tiger River Bengal Spa – Silver Ion / MPS System

Water Capacity: 330 Gallons

At Start-up

Fill spa: Adjust pH using test strips and pH Decreaser. Add pH decriaser slowly, not more than ½ TBSP at a time. Run the jets for 15 minutes, then retest.. Add pH decriaser slowly, not more than ½ TBSP at a time. Run the jets for 15 minutes, then retest..Once the pH is in range (7.2-7.6), add 2 TSP of the Dichlor (Chlorine - Bottle with Blue cap)

Add 2 Ounces of Stain and scale defense.

At each use:

Add 1-1/2 TBSP of MPS (non-chlorine shock). It's best if you add this before you use the spa, but after is OK too.

Weekly:

Add 1-1/2 TSP of the Dichlor (Chlorine) 12 hours before use and run the jets for 10-30 minutes. Cycle the smart jet valve so that the chlorine spreads to all parts of the spa's internal plumbing.

Add 2 ounces of stain and scale defense. This prevents build-up of scale on the equipment.

Monthly:

Remove filter. Spray with instant filter cleaner, let sit for 15 minutes, and hose off. Reinstall filter.

Every Four months:

Perform weekly chlorine shock, then drain the spa. Clean inside the shell with a rag, and if needed, a very little bit of well-diluted detergent, (most likely you will only need to do this at the water line.)

Replace the FreshWater silver Ion Cartridge.

Refill the spa using the above instructions for Start-up.

High Use:

After many people have been in the spa, it is a good idea to add the Dichlor per the above weekly care instructions, even if your week is not yet up.

NOTE: Check the pH Level weekly. The pH Will likely increase over time, requiring the addition of pH Decreaser. Hi pH will result in cloudy water and may cause skin irritation.

NOTE: These are generic recommendations, you may need to adjust chemical dosage to your specific operating conditions, but this is a good place to start. If you have questions, feel free to call us at 928-775-9884.
