

Care of your HotSpring Jetsetter Spa – Silver Ion / MPS System

INTRODUCE ALL WATER CARE PRODUCTS IN TO FILTER COMPARTMENT

Water Capacity: 215 Gallons

At Start-up

Fill spa: pH using test strips and pH Decreaser. Add pH decriaser slowly, not more than ½ TBSP at a time. Run the jets for 15 minutes, then retest.. Add 1 TSP of the Dichlor (Chlorine - Bottle with Blue cap)

Add 1-1/2 Ounces of Stain and scale defense.

At each use:

Add 1TBSP of MPS (non-chlorine shock). It's best if you add this before you use the spa, but after is OK too. Do not add more than one time per day, even if you use the spa more than that.

Weekly:

Add 1 TSP of the Dichlor (Chlorine) 12 hours before use and run the jets for 10-30 minutes. Cycle the smart jet valve so that the chlorine spreads to all parts of the spa's internal plumbing.

Add 1 ounce of stain and scale defense. This prevents build-up of scale on the equipment.

Monthly:

Remove filters. Spray with instant filter cleaner, let sit for 15 minutes, and hose off. Reinstall filters.

Every Four months:

Perform weekly chlorine shock, then drain the spa. Clean inside the shell with a rag, and if needed, a very little bit of well-diluted detergent, (most likely you will only need to do this at the water line.)

Replace the FreshWater silver Ion Cartridge.

Refill the spa using the above instructions for Start-up.

High Use:

After many people have been in the spa or if it gets cloudy, it is a good idea to add the Dichlor per the above weekly care instructions, even if your week is not yet up.

NOTE: Check the pH Level weekly. The pH Will likely increase over time, requiring the addition of pH Decreaser. Hi pH will result in cloudy water and may cause skin irritation.
